

Set 11

Procedure

- Open **Tableau** and connect to the dataset **Product_Categories.csv** using **Connect → Text File**.
- Verify that **Category** is recognized as a **Dimension** and **Sales** as a **Measure** in the Data pane.
- Create a **Funnel Chart** by dragging **Category** to Rows and **Sales** to Columns, sorting the sales values in descending order, and formatting the bars to resemble a funnel.
- Create a **Pie Chart** by selecting Pie from the Marks card, placing **Category** on Color and Label, and **Sales** on Angle to show the sales distribution across categories.
- Create a **Sales Table** by dragging **Category** to Rows and **Sales** to Text, then format and label the table appropriately.
- Create a **Dashboard** and add the Funnel Chart, Pie Chart, and Sales Table worksheets. Arrange them neatly for clear visualization.
- Enable **Use as Filter** for the charts, add the title "**Product Category Analysis Dashboard**", and save the workbook.
