

Set 11

Procedure

1. Open **Tableau** and connect to the dataset **Geographic_Data.csv** using **Connect → Text File**.
2. Verify that **City** is recognized as a Dimension and **Population**, **Avg Temperature**, and **Elevation** are recognized as Measures.
3. Create a **Map Chart** by assigning a geographic role to the City field (or using a symbol map) and add labels to display city names.
4. Create a **Scatter Plot** by dragging **Population** to Columns and **Avg Temperature** to Rows, then use **City** as Label and **Elevation** as Size or Color.
5. Create a **Geographic Data Table** by displaying City, Population, Average Temperature, and Elevation in tabular format.
6. Create a **Dashboard** and add the Map Chart, Scatter Plot, and Geographic Data Table worksheets. Arrange them appropriately for easy analysis.
7. Enable **Use as Filter** for the visualizations, add the title "**Geographic Data Analysis Dashboard**", and save the workbook.
