

SET 12

N Website Traffic Analysis

Procedure

1. Create the website traffic dataset.
2. Import the dataset into R Studio.
3. Generate a line chart for page views.
4. Create a bar chart for click-through rates.
5. Build a data table.
6. Integrate visualizations into a dashboard.

Code

```
library(ggplot2)
```

```
library(DT)
```

```
traffic <- data.frame(  
  Date = as.Date(c("2023-01-01","2023-01-02","2023-01-03")),  
  PageViews = c(1500,1600,1400),  
  CTR = c(2.3,2.7,2.0)  
)
```

Q1 Line Chart

```
ggplot(traffic,aes(Date,PageViews))+  
  geom_line()+  
  geom_point()+  
  labs(title="Daily Page Views Trend",  
        x="Date",  
        y="Page Views")
```

Q2 Top CTR Days

```
ggplot(traffic,aes(reorder(as.character(Date),CTR),CTR))+  
  geom_bar(stat="identity")+  
  labs(title="Top CTR Days",  
        x="Date",  
        y="CTR (%)")
```

Q3 Table

datatable(traffic,

caption="Website Traffic Data")

Q4 Dashboard Components

Use Line Chart + Bar Chart + Table in Tableau Dashboard
