Survey Responses Analysis

Dataset (CSV)

Procedure

1. Create the survey response dataset containing answers for three questions.
2. Import the dataset into R Studio.
3. Load the required libraries for visualization and data presentation.
4. Count the frequency of responses for Question 1.
5. Generate a grouped bar chart showing response distribution.
6. Reshape survey data and create a stacked bar chart representing responses across all questions.
7. Build an interactive table displaying individual survey responses.
8. Use all visualizations as dashboard components.
9. Interpret response trends and identify common answer choices.

R Code

```
library(ggplot2)
```

```
library(tidyr)
```

```
library(DT)
```

```
survey <- data.frame(
```

```
SurveyID=c(1,2,3),  
Q1=c("A","B","C"),  
Q2=c("B","A","A"),  
Q3=c("C","D","B")  
)
```

```
# Q1 Grouped Bar Chart
```

```
q1_freq <- as.data.frame(table(survey$Q1))  
colnames(q1_freq) <- c("Answer","Count")
```

```
ggplot(q1_freq,  
       aes(Answer,Count,fill=Answer))+  
  geom_bar(stat="identity")+  
  labs(title="Distribution of Answers for Q1",  
       x="Answer",  
       y="Frequency")
```

```
# Q2 Stacked Bar Chart
```

```
survey_long <- pivot_longer(  
  survey,  
  cols=c(Q1,Q2,Q3),  
  names_to="Question",  
  values_to="Response"  
)
```

```
ggplot(survey_long,
```

```
    aes(Question,  
        fill=Response))+  
geom_bar()+  
labs(title="Overall Survey Response Distribution",  
      x="Question",  
      y="Count")
```

Q3 Table

```
datatable(survey,  
          caption="Survey Responses")
```

Q4 Dashboard Components

Grouped Bar + Stacked Bar + Table
