

## Set 15

### Procedure

1. Connect the Website Traffic dataset to Tableau.
2. Import page views and click-through rate data.
3. Create a line chart showing page view trends over time.
4. Generate a bar chart for top-performing days based on click-through rates.
5. Create a stacked area chart for user interactions such as likes, shares, and comments.
6. Format all charts with appropriate labels and titles.
7. Build an interactive dashboard containing the visualizations.
8. Add filters and actions for user interaction and analysis.
